Vikas Pal

Software Engineer, Applied AI × Fintech · Open to Forward Deployed & Applied AI roles

Ahmedabad, Gujarat, India (IST) · open to remote, hybrid or on-site worldwide · palv499@gmail.com · linkedin.com/in/vikaspal1704 · github.com/vikaspal1704 · cal.com/vikas-pal-2mz8du · vikaspal.is-a.dev

SUMMARY

Software engineer with 3+ years full-time, plus internships, shipping production systems where fintech meets AI. At ViewTrade I took a white-label trading platform from idea to product; it merged 7 frontends into one and serves 300+ advisory and retail clients, and I build it with AI agents from clear specs and tests. Previously ran an LLM platform at 99.9% uptime while cutting model costs ~40%. In open source: a Rust matching engine at about 2M commands/s in the browser.

EXPERIENCE

ViewTrade Holding Corp. · Software Development Engineer (SDE) Aug 2025 – Present

GIFT City, Gandhinagar · API-driven brokerage and wealth-tech infrastructure

- Took a **white-label trading platform from idea to product**: broker firms design their own web and mobile trading apps from widgets, branding and feature flags; it **merged 7 frontends into one and serves 300+ advisory and retail clients**.
- Own it end to end: shaped the product and built it full-stack, and now guide the global team building on it.
- Brought **AI-first development** to the team: Claude Code and other agents build from clear specs and repo guardrails, and new features start from written scenarios and failing tests to protect money logic.
- Created the **developer portal** (API and Web SDK docs and onboarding guides) that makes onboarding smooth for broker firms integrating with the platform.
- Built core trading features: a multi-leg options strategy builder with payoff charts and Greeks, order tickets, stock, ETF and funds screens, and live prices that recover after a reconnect.
- Sole developer modernizing the **.NET/C# buying-power and cash-settlement system**, with AI agents helping read, refactor and test a large legacy codebase safely.

Zeus Learning · Software Developer Jun 2023 – Jul 2025

Mumbai · AI-powered test platform (Next.js, Python/Django, .NET, AWS)

- Built and ran the platform at **~50,000 requests/day with 99.9% uptime** under peak load.
- Engineered **semantic caching that cut LLM costs ~40%** without changing the model family.
- **Led 4 developers** to deliver a reporting SDK under hard client deadlines.
- Set up CI/CD with DevOps that made **deploys ~50% faster**; modular patterns cut debugging time ~20%.

Zeus Learning · Software Developer Intern Jan 2023 – May 2023

CultureX Entertainment · Full Stack Developer Intern Jul 2022 – Dec 2022

- Built web pages and product features for CreatorX in a team of 4; code reviews and pre-release bug fixing.

SELECTED OPEN-SOURCE PROJECTS

- **Arena**: a stock exchange in the browser. A dependency-free Rust matching engine, compiled to WebAssembly (under 90 KB): **about 2M commands/s in the browser; natively 2.4–3.7M/s, p99 ≈ 0.9–1.3 µs**. Differential-tested in CI against an independent Python engine on 1.5M random commands; deterministic journal replay.
- **FIX Protocol Lab**: FIX codec and TCP session engine (FIX 4.2–5.0 SP2) with resend and gap fill, plus a live visual front end.
- **F&O Wrapped**: privacy-first P&L analytics for Indian F&O traders across 4 brokers; FIFO in integer paise, fully in-browser PWA.
- **Recruiter Backend**: FastAPI service for LLM resume parsing and Pinecone semantic search; auth, mocked tests, Docker CI.
- **Live Orderbook Feed** (WebSocket L2 fan-out with backpressure) and **this portfolio** (on-device LLM, retrieval, JD fit check).

SKILLS

Languages	Python, C# / .NET, TypeScript / JavaScript, Rust, SQL
Backend	.NET, Django, FastAPI, Node.js, distributed systems, microservices, WebSockets, TCP, PostgreSQL
AWS	EC2, ECS / EKS, Lambda, API Gateway, S3, RDS, DynamoDB, SQS, SNS, Kinesis
Frontend	Front-end platform architecture, React, Next.js, Redux Toolkit, WebAssembly, Web Workers
AI / LLM	Production LLM platforms, semantic caching, RAG / vector search (Pinecone), Claude Code, AI agents, WebLLM
Fintech	Matching engines, L2 market data, FIX, P&L and charges, brokerage / wealth-tech APIs
Quality	Docker, GitHub Actions CI/CD, pytest, Vitest, Playwright, differential and golden-vector testing

EDUCATION

B.E. in Computer Engineering · LDRP Institute of Technology & Research (Gujarat Technological University) 2019 – 2023
